

Dear Okta Recruiting Team,

I'm writing to express my strong interest in the Solutions Engineer position for the Commercial segment at Okta. With over seven years of experience in backend software engineering and management within the fintech and cryptocurrency sectors, I've developed a deep technical foundation in building secure, high-throughput systems. I hope to bring this skillset to Okta and am eager to apply to the identity and access management (IAM) space.

At BitPay, I've spent years solving complex technical challenges that mirror the core concerns of Okta's customers. For instance, I spearheaded the integration of an automated KYC pipeline using third-party APIs, which successfully processed over 2 million users with a 70% straight-through-processing rate. This project required balancing particular security protocols with a seamless user experience; a core tenet of Okta's mission to provide secure and neutral identity infrastructure. I've also collected a bit of experience explaining complex technical concepts to non-technical coworkers, a skill that's important to helping solve customer problems.

What draws me to Okta is your commitment to securing every identity, especially as organizations transition into the era of AI and LLM-based workflows. My technical toolkit, including Node.js, AI agents, and AWS, aligns directly with your requirements for hands-on experience in web and backend development. Furthermore, my recent work leading cross-functional teams to integrate new blockchain networks and optimize financial processes has honed my ability to act as a functional consultant, bridging the gap between deep technical execution and business value.

I am particularly excited about the opportunity to partner with Commercial Account Executives to demonstrate how Okta can solve the identity challenges of growing organizations. I thrive in environments where I can combine my technical acumen with a passion for customer success.

Thank you for your time and consideration. I look forward to the possibility of discussing how my background in secure system design and technical leadership can contribute to the continued success of the Okta Solutions Engineering team.

Best regards,

Robert Brown
